

## Preparing files for printouts for stands/frames

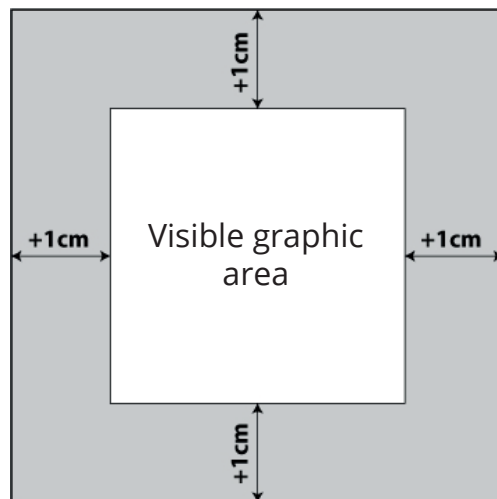

When ordering, you will be provided with the net dimensions from which you will need to prepare your artwork. Graphic templates are sent only for non-standard shapes, i.e. other than rectangles.

### Print format

Artwork should be prepared in a gross format. This format differs depending on the material on which you want to print.

### Stretch 260g

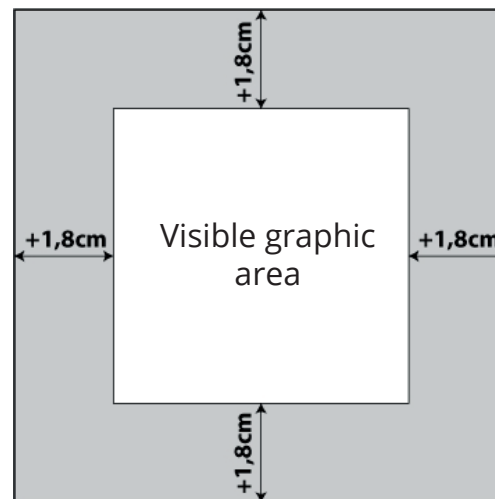

material used for printing frames and stands.

To the net area (visible) of the graphic you need to add a 1 cm bleed on each side

### Backlit Polyester 190g

material used for printing frames with backlight.

To the net area (visible) of the graphic you need to add a 1,8 cm bleed on each side

We measure the net dimension of the graphic from the inside of the outer edge.
